

MADE FOR YOU

Arisure[®] Closed System Transfer Device

The new Arisure CSTD - made to deliver safety, ease and simplicity

The Arisure Closed System Transfer Device is designed for healthcare professionals just like you to ensure the safe compounding, transport, and delivery of hazardous drugs. This keeps you focused on what matters — the patient.

ARISURE CLOSED VIAL ADAPTOR

The Arisure CVA is made to protect you from hazardous drug exposure. It is completely closed, mechanically trapping anything from escaping the vial and preventing contaminants from entering the vial. It is a safe and simple solution for reconstitution and transfer of drugs.

ARISURE CLOSED MALE LUER

The Arisure CML keeps you safe. Easy to use and needle-free, it forms a dry disconnect when used with an Arisure needle-free valve. It is completely closed when not accessed, preventing accidental spills or discharge of hazardous drugs.

ARISURE DRY SPIKE

The Arisure Dry Spike gives you an easy, safe way to transfer a dose into a bag or container while maintaining a closed system.
